SUMMARY

- **Software Engineer at Yelp** – leading design and delivery of secure, resilient, and scalable systems
- **12+ years Full-Stack engineer** – driving technical direction, planning, estimation and system design
- **2 years academic experience** – designing and implementing **ML/AI solutions in speech and NLP**
- **MS Computer Science** from Dalhousie University with a full graduate scholarship

TECHNICAL SKILLS

Programming Languages	Python, JavaScript/TypeScript, SQL, JAVA
Frameworks	Pyramid, React, Node.js, Angular
Architecture & Design	Distributed Systems, Microservices, Event-Driven, Domain-Driven Design, API Design (REST, GraphQL)
Cloud & Infrastructure	AWS, Google Cloud (GCP), Docker, Kubernetes, Jenkins, Github Actions Active Directory
Observability & Security	Splunk, Grafana, production debugging, least-privilege enforcement

EXPERIENCE

Software Engineer (IC3) – [Yelp](#)

Sep 2022 – Present

- **Backend Focused Full-Stack engineer** architecting systems to strengthen platform security.
- **Leading development of a centralized access management platform**, driving technical design through clear specifications and guiding implementation, ensuring scalability and long-term evolution.
- **Contribute to strategic planning**; championing proposals, securing alignment, and improving workflows, reducing security risk, expanding system capabilities, and **\$500K+** in annual savings.
- **Architected access management solution for non-SSO apps**, onboarding **60+** apps, closing critical security gaps, reducing insider threats, and strengthening incident response readiness.
- **Strengthened third-party application governance** by streamlining onboarding workflows, establishing a centralized application inventory, and clarifying application ownership visibility.
- **Owned** least-privilege enforcement for **200K+** access grants, analyzing **10M+** logs/day to identify, notify, and revoke unused access across high-risk systems without disrupting critical workflows.
- **Led cross-functional initiatives end-to-end**, collaborating with multiple teams to define requirements, design pragmatic solutions, and coordinate seamless rollouts.
- **Contributed to multiple organization-wide working groups** overseeing logging and alerting infrastructure, GraphQL schema governance, and interview questions and signal quality.
- **Participated in on-call rotations and incident investigations**, translating root-cause analysis into systemic improvements that strengthened company-wide systems reliability and continuity at scale.
- **Mentored engineers across levels**; elevating quality, prioritization and technical confidence.

Software Developer – [MindSea](#)

Mar 2020 – Aug 2022

- Developed Full-Stack systems, including web applications, services, and native/hybrid mobile apps.
- Championed Authentication and Authorization, integrating Auth0 within enterprise level application.
- Led development while being the client facing representative providing consultations and estimates.
- Took ownership of overdue projects, accelerating development and meeting clients' expectations.
- Onboarded all teams to use cloud-based CI/CD platform Bitrise to reduce build time and dev efforts.
- Enforced PR review standards, elevating code quality and reducing post-deployment issues.
- End-to-end project ownership while providing maintenance, and working on optimizations.
- Promoted web accessibility and advocated adoption across all team projects.
- Exposure to Finance, Taxation, Healthcare, Professional and Business Management domains.

Research Assistant – [NICHE Research Group](#), Dalhousie University

Sep 2017 – Feb 2020

- Developed Full-Stack prototype for a healthcare risk management system under active research.
- Applied ML/AI algorithms for analytical tasks using CUDA-accelerated servers.
- Streamlined development introducing Jenkins CI/CD. Championed on interactive visualizations.
- Supported research, led labs, delivered lectures, and monitored student progress.

Software Engineer – [Techlogix](#)

Oct 2015 – Sep 2017

- Owned core financial systems for a global Exchange and Remittance company.
- Developed a video conferencing module for a healthcare application, ensuring HIPAA compliance.
- Supervised and mentored new engineers, fostering a collaborative team environment.
- Implemented Agile to legacy long-running projects, improving delivery efficiency by 20%.

Web Developer – [Four-Nodes](#)

Jul 2013 – Oct 2015

- Development and enhancement of Web based projects requiring **interactive visualizations**.
- Created automated bots for bulk buying and price tracking, optimizing e-commerce strategies.

MAJOR FREELANCE PROJECTS

Hybrid Mobile Application for a food delivery company

Jun 2016

SSO Auth, GPS-based restaurant discovery, order management, Rider tracking and assignment.

Management Solution for a mobile repairing company

Mar 2016

Authentication, Job Management and lifecycle, Notification Management.

EDUCATION

M.S. Computer Science – Dalhousie University – Fully Funded Scholarship

Feb 2020

- Thesis (<http://hdl.handle.net/10222/77995>): *Applying Speech Recognition and Language Processing Methods to Transcribe and Structure Physicians' Audio Notes to a Standardized Clinical Report Format*

B.S. Computer Science – National University of Computer and Emerging Sciences, FAST

May 2015

- Awarded Merit Based Scholarship based on academic performance.
- Served as Web Development Head at DevSoc (The Developer's Society)
- Developed Candidate Management Portal for Procom 2014 (Pakistan's biggest IT event)
- Final Year Project – Smart Security Guard: Native Android application for real-time face recognition using OpenCV and MapReduce, achieving 21 FPS with simultaneous detection of 3 faces.
